### LAWYER FIRM MANAGEMENT SYSTEM

#### Online law firm management solution

A one-stop online law firm management solution that provides lawyers with a convenient place to manage their cases, information, documents, and payments.

[View full Case Study →](#)

**Lawyer Firm Management System**  
A one-stop online law firm management solution that provides lawyers with a convenient place to manage their cases, information, documents, and payments.

**Project Overview**

Foremost law firm in Middle East

A mobile first, lesser client data background tool for easier client management services online to provide with a better user experience. It is an intermediate cases, documents and payment management system for lawyers. The client is the statutory owner or a permanent law firm, and the service provider is the manager of the trustees (constituted professionals of their client company).

The legal industry is full of old, archaic ways of doing business. The most efficient and advanced is digitalization. The legal industry is still dealing with paper documents, lawyers' lot of time and effort needlessly, thereby increasing the cost of services. This is the statutory owner or a permanent law firm, and the service provider is the manager of the trustees (constituted professionals of their client company).

**Multiple Dashboards**

App contains two dashboards to set the features according to the service simple we developed two dashboards for client management and account management.

**Client management Dashboard**

Client management dashboard provides features as shown below:

- Users can view a list of clients and their contact details, service, and working information.
- Users can view a list of clients and their contact details, service, and working information.
- Users can view a list of clients and their contact details, service, and working information.

**Our Approach**

Attention to every details of the requisite

**Our Solution**

Deployed powerful software solution for customer needs

We engaged client in client requirements and provided a dedicated team to the client so the client can work on the requirement.

**A Plan to Success!**

We worked with different systems of the same domain and our PM kept in touch with the client before each step just to make sure that we are not mess any functionality of the client system. We followed the Agile methodology to meet requirements as well as proper requirement gathering.
